there is a growing interest in the use of ontologies for multi agent system app cations on the one hand the agent paradigm is

successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal on the other hand ontologies have established themselves as a powerful tool to enable knowledge sharing and a growing number of applications have benefited from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems in principle ontologies and agents are a match made in heaven that has failed to happen what makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user communication ultimately depends on understanding the goals preferences and constraints posed by the user autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting communication but also autonomy and proactiveness depend on knowledge the ability to communicate depends on understanding the syntax terms and structure and the semantics of a language ontologies provide the terms used to describe a domain and the semantics associated with them in addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms these constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based

the US information technology research and development ecosystem was the envy of the world in 1995 however this position of leadership is not a birthright and it is now under pressure in recent years the rapid globalization of markets labor pools and capital flows have encouraged many strong national competitors during the same period national policies have not sufficiently buttressed the ecosystem or have generated side effects that have reduced its effectiveness as a result the US position in IT leadership today has materially eroded compared with that of prior decades and the nation risks ceding IT leadership to other nations within a generation assessing the impacts of changes in the information technology R&D ecosystem calls for a recommitment to providing the resources needed to fuel US IT innovation to removing important roadblocks that reduce the ecosystem's effectiveness in generating innovation and the fruits of innovation and to becoming a lead innovator and user of IT the book examines these issues and makes recommendations to strengthen the US IT R&D ecosystem

in this book we discuss requirements challenges design and implementation of two knowledge management systems smartappgen and autoquiz this book will help automating knowledge management of your company institute smartappgen automatically generates the corresponding knowledge application from structured knowledge represented as xml excel sheet ppt etc as example suppose a health worker needs to undergo training for few weeks at the training s he has to go through hundreds of pages of knowledge materials what if a knowledge application is automatically built using the knowledge available and installed in his/her smart phone the training time can be reduced drastically also the health worker would not have to remember all hundreds of pages of documentation s he would not have to refer to the printed guidelines from time to time for executing his/her daily routine so it is clear that knowledge application can increase efficiency and accuracy of healthcare services not all knowledge are so well formatted that a knowledge application can be automatically developed and installed in a smart phone so people still have to undergo trainings and remember the things learned at training autoquiz comes handy in such cases given knowledge e.g. training material presentation etc in a text format it can generate a meaningful quiz from the unstructured knowledge at end of any training presentation a quiz can be automatically generated and all participants can be asked to take the quiz there score is immediately calculated this achieves three things people would be more alert in training the trainer can find the effectiveness of his training immediately and trainer manager would know which all people are falling short in understanding and take appropriate measures to bring them up to the mark
